- This muffler requires flame cones which are still attached to be serviceable.
- Inspect under clamps for corrosion, poor fit or cracks.
- Inspect muffler for blisters or bulges under heat shroud.
- ☞ This part has a hot area at the elbow. Inspect this area for black flaking metal and bulges.

**Note A:** The mount is a new STC and is a far superior replacement compared to the original mount. The modifications include doublers and thicker tubes in the high stress areas as well as all four rubber mounts are heavier, reducing vibration.
